PROPER HANDWASHING WITH WARM WATER:

The **BOSCH HOT WATER HEATER** is not only convenient in putting hot and warm water easily at your disposal but it is also essential in providing proper handwashing capability. Correct handwashing is necessary to reduce contact with germs and bacteria as well as eliminate the spread of illnesses that are constantly spread through hand-to-hand contact. Infectious diseases which are generally spread through hand-to-hand contact include the common cold, flu and several gastrointestinal disorders. Research shows that cold water handwashing should not be used for routine handwashing and for a variety of reasons. The most obvious being, soap lathers up easily in warm water releasing its active ingredients, making it more effective in cleaning your hands of dirt, grease, and other harmful bacteria which can cause illness. Using warm water is not only the most effective but it will not strip away the skins natural oils and regular use of cold water can. Frequent use of cold water to wash your hands can also damage your skin causing skin irritations such as dermatitis. **CALLAHEAD** understands that proper hygiene and good health is imperative to our clients, their employees and guests. The **BOSCH HOT WATER HEATER** is beyond doubt an essential addition to any sink system when hot water is not available.

HOW TO WASH YOUR HANDS PROPERLY:

Wet your hands with warm water. • Apply one dose of liquid soap and lather well for 15-20 seconds (or longer if the dirt is ingrained). • Rub hands together rapidly across all surfaces of your hands and wrists to help remove dirt and germs. • Don't forget the backs of your hands, your wrists, between your fingers and under your fingernails. • Wash your hands for at least 10 to 15 seconds. • Rinse well under warm running water and make sure all traces of soap are removed, as residues may cause irritation. • Pat your hands dry using paper towels. Make sure your hands are thoroughly dry. • Dry under any rings you wear, as they can be a source of future contamination if they remain moist. If possible, remove rings and watches before you wash your hands. • Each person should always use disposable paper towel or their own hand towel.
