

Aqua Mover

Advanced Water Management for Maintaining Superior Portable Restroom Freshness

At Callahead, we know that the quality of your portable restroom rental depends entirely on the quality of the water inside. That's why we've invested in the Aqua-Mover Quality Assurance System—a cutting-edge, internal water circulation technology designed to keep our freshwater tanks impeccably clean, odor-free, and reliable.

This system is an integral part of every restroom system with holding tanks, ensuring your users experience the highest water quality possible, every time.

The Aqua Mover Advantage: Water Freshness & Preservation

We utilize specialized, high-efficiency circulation pumps inside our large freshwater holding tanks. This proactive measure elevates your rental experience by directly addressing the common problem of water degradation in stored supplies:

1. Zero Tolerance for Stale Water and Odor

Stagnant water is the primary source of unpleasant, musty odors in portable restroom systems. Our constant circulation prevents the water from sitting still.

- **Continuous Preservation:** The system constantly cycles the water, preventing the biological activity and microbial growth that lead to water degradation and cause stale odors.
- **A Superior Experience:** This means a consistently fresher, cleaner-smelling restroom for your staff, guests, or site visitors.

2. Maximized Water Quality and Clarity

We work to maintain the highest standard of water being delivered for handwashing and flushing.

- **Sustained Clarity:** The powerful circulation prevents fine particles and mineral deposits from settling. This maintains the water's clear appearance and prevents the buildup of grime that can compromise quality.
- **Reduced Tank Contamination:** By ensuring constant movement, we proactively fight the physical conditions that allow contaminants to multiply on tank surfaces.

The Result? When you choose Callahead, you are choosing a service provider committed to the highest level of water maintenance and preservation. The Aqua-Mover System is our promise of a better rental experience, included with every unit that uses holding tanks.

Revolutionizing Fresh Water Quality in Portable Sanitation

Inventor and Industry Leader: Charles W. Howard

Charles W. Howard, the President and CEO of CALLAHEAD, stands as a pioneer in the portable sanitation industry. Since 1976, Howard has been recognized for his innovative mind and remarkable contributions, introducing countless inventions that have helped to advance the field. His leadership has positioned CALLAHEAD at the forefront of industry standards, continually pushing the boundaries of what is possible in portable sanitation solutions.

Introducing the Aqua Mover: A First for the Industry

The Aqua Mover represents a groundbreaking advancement in portable sanitation technology as it has never been used in the field before. Designed as a fan positioned at the bottom of CALLAHEAD's large freshwater tanks, the Aqua Mover creates powerful water movement that mimics the effects of a storm inside the tank. This motion has been scientifically proven to kill algae, mold, and bacteria, setting a new standard for water cleanliness and safety. By utilizing high-efficiency circulation pumps, CALLAHEAD ensures that water in their tanks is continuously moving, a proactive measure unavailable elsewhere in the industry.

Ensuring Clean and Fresh Water

Experience a new era of water freshness and cleanliness with the Aqua Mover, the ultimate solution for portable sanitation. Stagnant water is the leading cause of musty odors and unpleasant smells in freshwater tanks, but the Aqua Mover's innovative design puts an end to these problems for good. Its advanced circulation system utilizes a powerful 110-volt pump capable of moving an impressive 2,100 gallons per hour, expertly simulating natural currents within your tank. This not only keeps water in constant motion—helping to prevent the growth of mold, bacteria, and algae—but also encourages a healthy flow that provides essential exercise for the water, supporting optimal quality for handwashing and cleaning.

The Aqua Mover's continuous cycling ensures ongoing water freshness and preservation, while its quiet, efficient operation maintains a peaceful environment. Enhanced oxygen levels are promoted as the water is circulated, helping to support the cleanest, healthiest water possible. The system's magnetic and suction base precisely creates natural water motion, guaranteeing water never becomes stagnant and preventing mineral or fine particle build-up. With Aqua Mover, you'll enjoy crystal-clear water and a superior sanitary experience—making it the premier choice for anyone demanding the very best in portable sanitation.

CALLAHEAD is the world's best portable sanitation company

CALLAHEAD's commitment to innovation and excellence has set us apart as the world's leading company in portable sanitation. Thanks to the visionary leadership and inventive genius of Charles W. Howard, who has contributed more groundbreaking advancements to the industry than anyone else, CALLAHEAD is recognized worldwide for pioneering solutions that others simply cannot match. Among these innovations, the AQUA MOVER stands out as a testament to the company's dedication to improving freshwater quality and setting new industry standards in portable sanitation technology.
