La Femme toilette

Designed & Created Exclusively by **CALLAHEAD**

The word "toilet" came to be used in English along with other French fashions. It originally referred to the toile, French for "cloth", draped over a lady or gentleman's shoulders whilst their hair was being dressed, and then (in both French & English) by extension to the various elements, and also the whole complex of operations of hairdressing and body care that centered at a dressing table, also covered by a cloth, on which stood a mirror and various brushes and containers for powder and make-up: this ensemble was also a toilette. As the years went by, the word evolved into actually being the room or facility in which one arranges their toilet, perhaps following the French usage cabinet de toilette, meaning powder-room. In modern days, toilet refers to the plumbing fixture that one might use in the "bathroom," with "bathroom" now describing the facility one would go to for the purpose of using the toilet or lavatory.
